

Case Study

New Premier Inn Hotel Central London

Our Client

Bennett Construction

Sector

The hotel sector

Service and Products provided

- Cills
- String course

The Project

Over fifty tonnes of cast stone cills and band course products were supplied, with Procter working closely with the architect and attending site meetings to ensure that the bespoke units were manufactured as economically as possible, and that the quality was not compromised through careless site handling and installation.

The Results

This project for an international hotel chain illustrates the way in which the judicious use of cast stone decorative features can transform the appearance of a building, achieving maximum impact for minimal cost and effort.

Quarried stone has traditionally been associated with important, high-quality buildings, so cast stone is a straightforward way for a building to benefit from this association but at a fraction of the cost.
